Click on Mail, Add Account

Add Other Account (at the bottom), then CONTINUE.

Next box says "Add a Mail Account"

Full name: - put the name of the account

Email address: - "temp@zaks.com" <-- your FULL email address

Password: xxxxxxxxxx <-- your password

then CREATE

It comes back and says "Account must be manually configured"

Click NEXT

Next box says "Incoming Mail Server Info"

Account type: IMAP or POP <- Your choice, I'm using IMAP

Mail Server: mail.zaks.com

User Name: temp@zaks.com <<-- you FULL email addresss

Password: xxxxxxxxx <- your password duh.

Click Next

It will say "verifying" for a while. Just wait here.

Next box says "Outgoing Mail Server Info"

SMTP Server: mail.zaks.com

User Name: temp@zaks.com <<-- your FULL email address

Password: xxxxxxx <- password again

Click CREATE

Then it goes back to mail and your mail should be displayed.

To test it compose an email. In the FROM field there may be a

drop down that you can choose the "From" make sure you use your

email you just put in.

Problems -

While Mail is open Go to menu item MAIL, ACCOUNTS. Your added account

is in the left column (if not you messed up something, start again), click

it.

It should say:

fullname - name you gave it

Description - your FULL email address

password is **********

User with: Mail is checked.

Then click Advanced at the bottome. Imap Hostname should be mail.zaks.com

Imap Path Prefix: should be blank

Port is 143, SSL is NOT checked.

Cancel out this if it's ok.

If that was OK, then go to MAIL, Preferences. Choose the new account.

Should say:

enable this account is checked.

Account type: Imap

Description: temp@zaks.com <<- full email address

Email Address: temp@zaks.com <- ""

Full Name: name you gave it.

Incoming Mail server: mail.zaks.com

User name: temp@zaks.com <<- full email address

Password: *********

Outgoing mail server (SMTP): mail.zaks.com

user only this server checked.

TLS Certificate: none.

Toward the top choose ADVANCED.

Automatically detect and... is checked

Include when automatically ... is checked

Automatically download ... is checked

Imap path prefix is EMPTY

port is 143

use SSL is NOT checked

Authentication is Password

allow insecure authentication is checked.

Use IDLE command .. is checked.
